

# NEW POURING MEDIUM AND INKS PROJECT

HERE'S  
WHAT  
YOU'LL  
NEED:

**CREATIVE  
SLANT  
CANVAS**

**LIQUITEX  
ACRYLIC  
INK**

**LIQUITEX  
POURING  
MEDIUM**

## STEP 1

Pour desired quantity of Liquitex pouring medium into a squeeze bottle. Add drops of Liquitex Acrylic Ink to the pouring medium.

## STEP 2

Stir or shake to mix the colour. Add more colour if required and mix again. When your mixture is ready, allow it to sit for 10 minutes if stirred or 30+ minutes if shaken, to prevent bubbles.

## STEP 3

Mixture can be poured directly on to the canvas.

## STEP 4

Manipulate with painting tools or by changing the angle of the canvas.

## STEP 5

Allow at least one day of drying time. If the paint film is thicker, allow up to two days of drying time.

# TIPS AND TECHNIQUES

## TIP 1

Paint wet in wet. Multi coloured compositions can be created in one sitting if several colours are prepared at a time.

## TIP 2

Paint a group of Creative Slant Canvases together and make use of the angled surfaces to create unique structural art pieces.

## TIP 3

Pours and pools can be layered. Apply another coat after the first has dried.

## TIP 4

Turn the canvas on its side to create thin drips. Allow the paint to run down the surface at a variety of speeds.

## TIP 5

Marbled surfaces can be created using multiple colours applied side by side then blended using a palette knife or pointed tool through the surface.

## TIP 6

When using Creative Slant Canvas, use a support to ensure the artwork is flat for drying.

## TIP 7

Dust can get caught in the paint film if left open in the air. Cover your painting with a large cardboard box to ensure a clean pour.
